

# Getting Started

## Draft Version V1.2 (Instructions subject to change)

Workshop 1 (out of 10 marks - 1% of your final grade)

In this workshop, you will code and execute a C-language program using a Visual Studio Integrated Development Environment (IDE).

### LEARNING OUTCOMES

Upon successful completion of this workshop, you will have demonstrated the abilities:

- to use Visual Studio to code, edit and execute a C-language program
- to login to a remote host using an SSH client
- to transfer source code between a local computer and a remote host using an SFTP client
- to describe to your instructor what you have learned in completing this workshop

### SUBMISSION POLICY

Your workshops are divided in two sections; [in\\_lab](#) and [at\\_home](#).

The “[in\\_lab](#)” section is to be completed **during your assigned lab section**. It is to be completed and submitted by the end of the workshop. If you do not attend the workshop, you can submit the “[in\\_lab](#)” section along with your “[at\\_home](#)” section (a 30% late deduction will be assessed). The “[at\\_home](#)” portion of the lab is **due the day before your next scheduled workshop**

All your work (all the files you create or modify) must contain your name, Seneca email and student number.

You are responsible for regularly backing up your work.

### IN-LAB: (30%)

For the in-lab part you are to write a C program that displays

```
> ** Welcome to C Programming ** <
```

on a separate line (only the part between > and < and highlighted in yellow).

[Prepare a Visual Studio Solution on your local Computer](#)

Create a Visual Studio 2017 project using the following instructions:

- Start Visual Studio 2017
- Select File → New → **Project...**
- Select Visual C++ → Windows Desktop → **Windows Desktop Wizard**
- Enter Workshop1 as the Project Name | Select OK
- Set Application Type: **Console Application (.exe)**
- Uncheck **Precompiled Header**
- Check **Empty Project** | Click OK
- Select Project -> Add New Item
- Select Code | C++ file | Enter w1\_lab.c as the File Name | Press OK
  - *Make sure the file extension is ALWAYS ".c". This forces Visual Studio to use the C compiler.*
- Enter your source code
- Select Build | Build Solution
- If unsuccessful, fix your errors and then Select Build | Build Solution (Or <Ctrl>+<Shift>+B)
- If successful, Start without Debugging (Or <Ctrl> + F5)

### Test your Solution on the Remote Host (Matrix)

Once your Visual Studio solution runs successfully, test your source file on matrix using the following instructions

- Open an SSH client like putty
- Login to matrix.senecac.on.ca
- Enter your userid and password
- create a directory named w1 and change into that directory
  - `mkdir w1 <ENTER>`
  - `cd w1 <ENTER>`
- Open an SFTP client like WinSCP
- Login to matrix.senecac.on.ca
- Enter your userid and password
- Transfer your source file from your local computer to the directory named w1
  - *Make sure the files are transferred in text and not binary, change the transmission setting from automatic to text.*
- Compile and run your solution on matrix
  - `gcc w1_lab.c -o w1 <ENTER>`
  - `w1 <ENTER>`

Make sure the output is exactly as required: **\*\* Welcome to C Programming \*\***

## IN\_LAB SUBMISSION:

If not on matrix already, upload your `w1_lab.c` file to your matrix account (see SFTP instructions above). Compile and run your code and make sure that everything works properly.

Then, run the following script from your account: (replace profname.proflastname with your professor's Seneca userid)

```
~profname.proflastname/submit 100_w1_lab <ENTER>
```

and follow the instructions.

## AT\_HOME: TITLE (30%)

For the at\_home part of your submission, you are to upgrade your program to display:

```
>*****<
>** Welcome to C Programming **<
>*****<
```

Save your solution in a source file named `w1_home.c`

## AT-HOME REFLECTION (40%)

In 3 or 4 sentences describe in your own words what you have learned in completing this workshop in a text file named `reflect.txt`.

**Note:** when completing the workshop reflection it is a violation of academic policy to cut and paste content from the course notes or any other published source, or to copy the work of another student.

## AT\_HOME SUBMISSION:

If not on matrix already, upload your `w1_home.c`, `reflect.txt` to your matrix account (see SFTP instructions above). Compile and run your code and make sure everything works properly.

Then run the following script from your account: (replace profname.proflastname with your professors Seneca userid)

```
~profname.proflastname/submit 100_w1_home <ENTER>
```

and follow the instructions.
